R.20-05-003

Order Instituting Rulemaking to Continue Electric Integrated Resource Planning and Related Procurement Processes.

Ratesetting

Comr. Alice Reynolds - Judge Fitch

PROPOSED OUTCOME:

- Adopts a Preferred System Plan (PSP) and Portfolio based on a greenhouse gas emissions target of 25 million metric tons by 2035. Incorporates the preferred portfolio planning preferences included in the 2022 individual integrated resource plans (IRPs) of all load-serving entities (LSEs) within the Commission's IRP purview. Recommends the PSP portfolio to the California Independent System Operator (CAISO) as the reliability and policy-driven base case for the 2024-2025 Transmission Planning Process.
- Denies a petition for modification (PFM) of Decision (D.) 21-06-035 related to required procurement of resources to replace, in part, the energy from Diablo Canyon Power Plant. Also grants, in modified form, a PFM addressing the long lead-time procurement requirements in D.21-06-035 and D.23-02-040.

SAFETY CONSIDERATIONS:

- The IRP and procurement processes seek to ensure that the electricity system remains safe and reliable through the purchase of sufficient generation, storage, and demand-side resources by LSEs.

ESTIMATED COST:

- This decision includes planning based on modeled cost assumptions. Actual resource costs will be dependent on LSE procurement activities between now and 2035. Also adds \$18 million to support Commission staff modeling efforts for integrated resource planning over the next six years.
